

Access

From the Kettle Falls Information Center in Kettle Falls travel 3 miles west on Highway 395 across the Kettle Falls bridge to the junction with State Route 20. Turn left and travel 7 miles to the Log Flume Interpretive site. Turn left into the parking lot.

Points of Interest

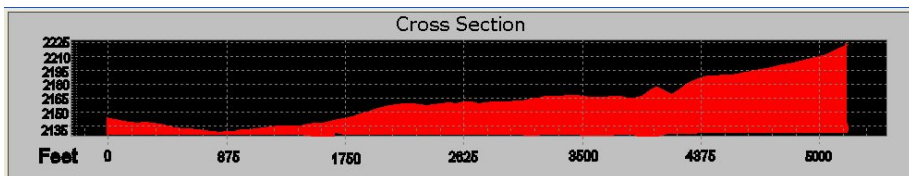

View #1: Sherman Creek

View #2: Bridge to Canyon Creek

History: In 1920 and for the next two decades logs were floated down a flume from the CCC Camp Growden, 2 miles west of this site, to the Columbia River near the Sherman Fish Hatchery to be cut for sash at the White Pine Sash Mill. Logs in a pond were released during Spring high water and followed down the flume where they would often jam up and need to be freed.

Cautions: The water still runs high and fast in Sherman Creek during Spring and early Summer. Stay out of the water.

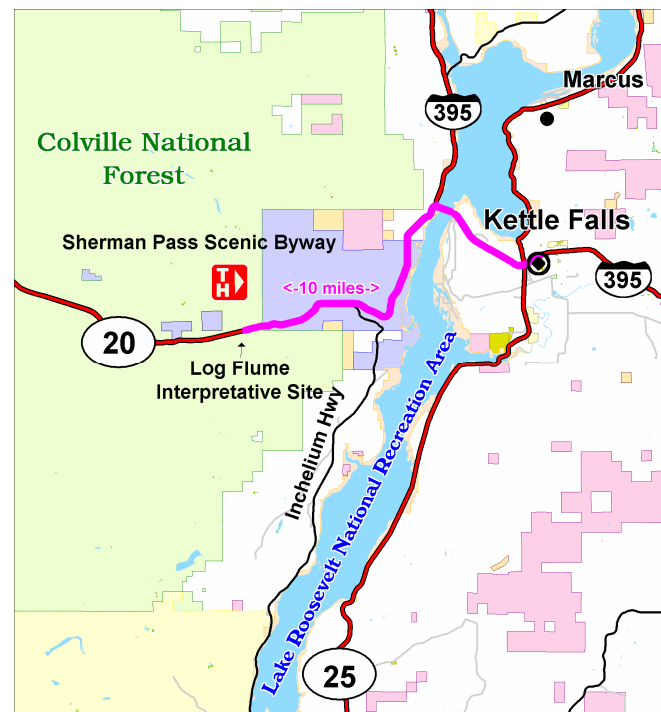

Log Flume Trail #93

Characteristics	
Elevation at Trailhead	2150 ft
Highest Point	2225 ft
Elevation Change	75 ft
Length	1 Mile
Difficulty	Wheelchair Access
Season	Spring, Summer, Fall, Winter

Description

The Log Flume Interpretive Trail #77 is 4 tenths of a mile long on a paved level path. Restrooms are near the trailhead and parking lot. The Log Flume Trail #93 is also paved and connects to the Canyon Creek Campground over a paved nearly level trail along Sherman Creek.
